
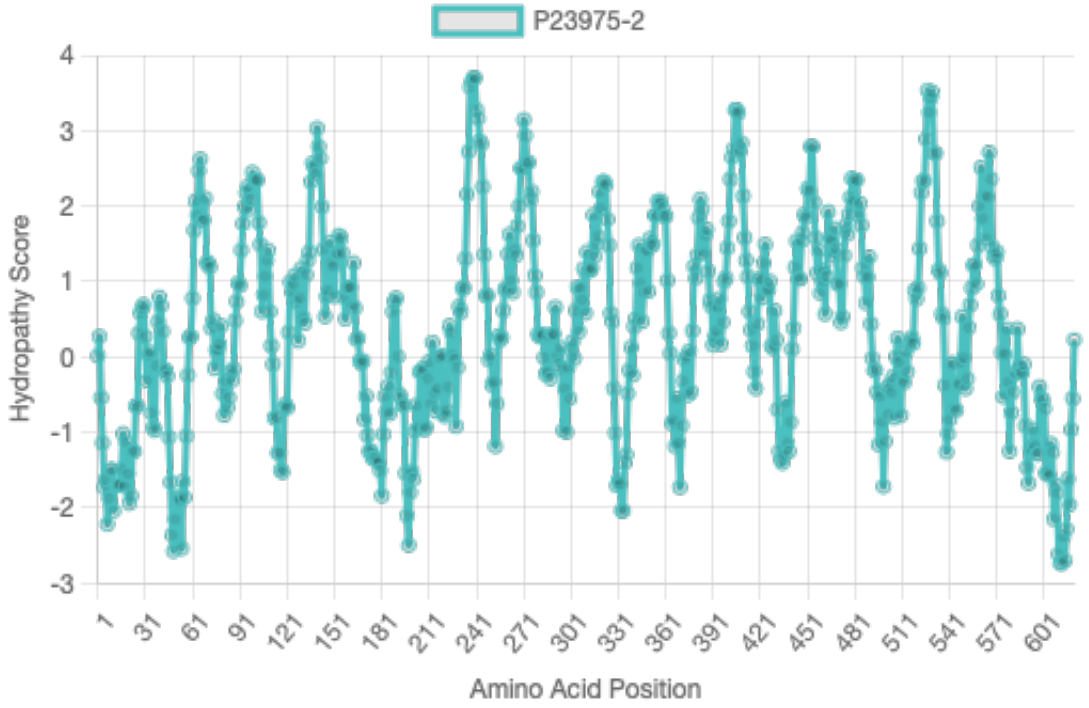
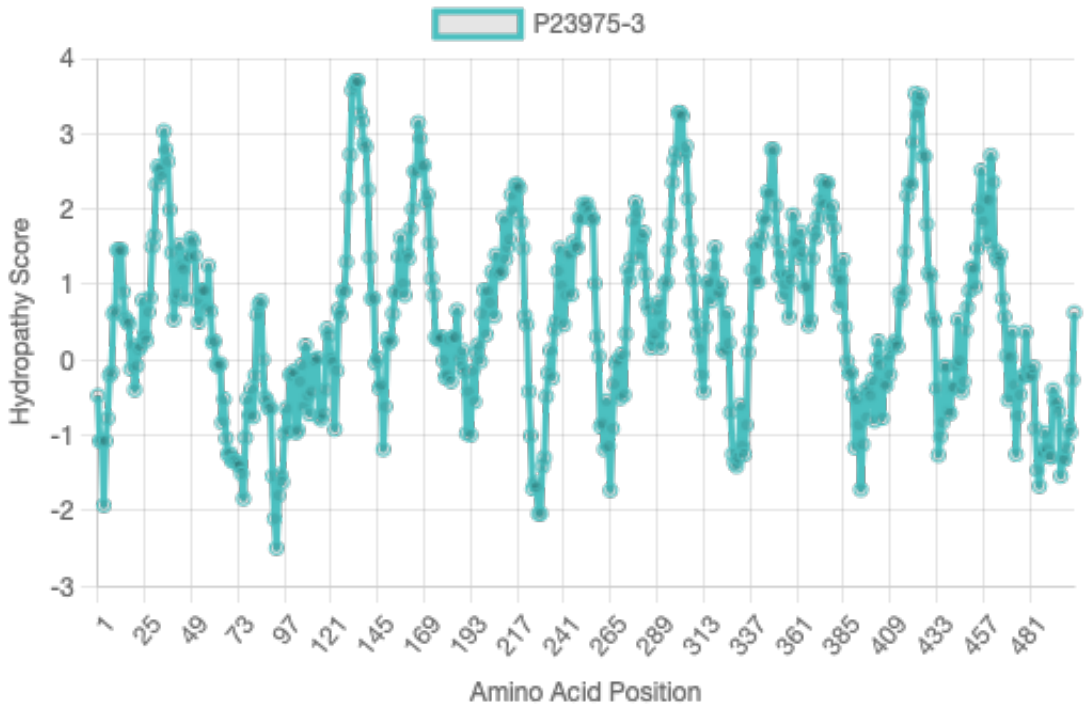
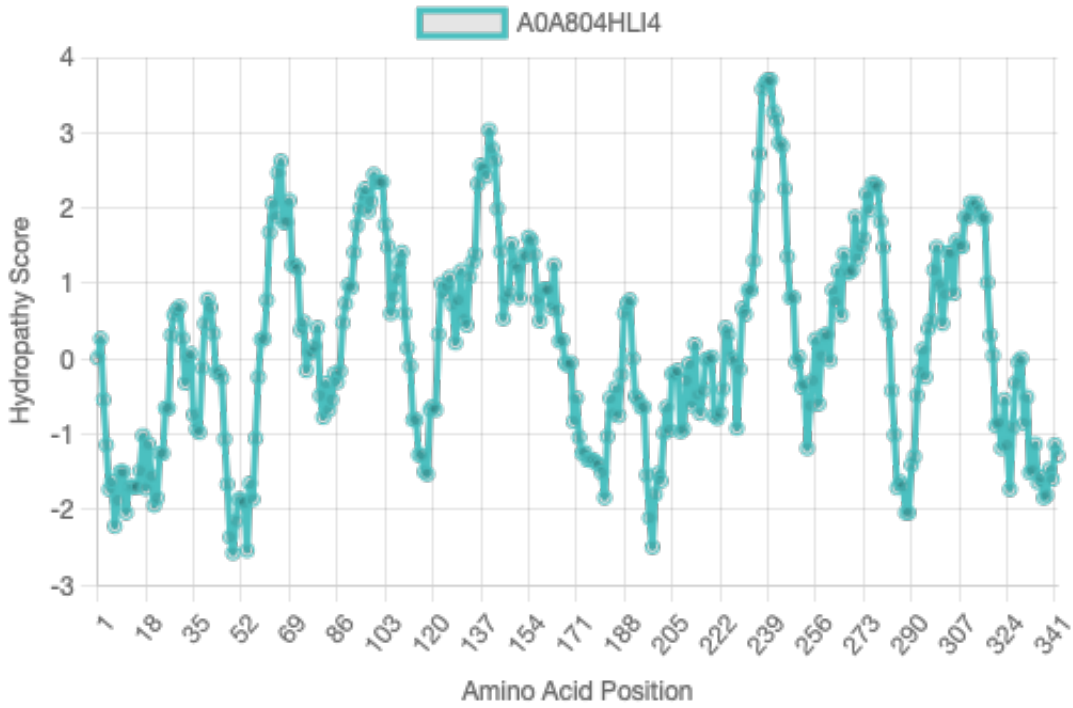
Kyte-Doolittle hydropathy plot for the sequence "P23975". Positive values indicate hydrophobic regions, while negative values indicate hydrophilic regions.



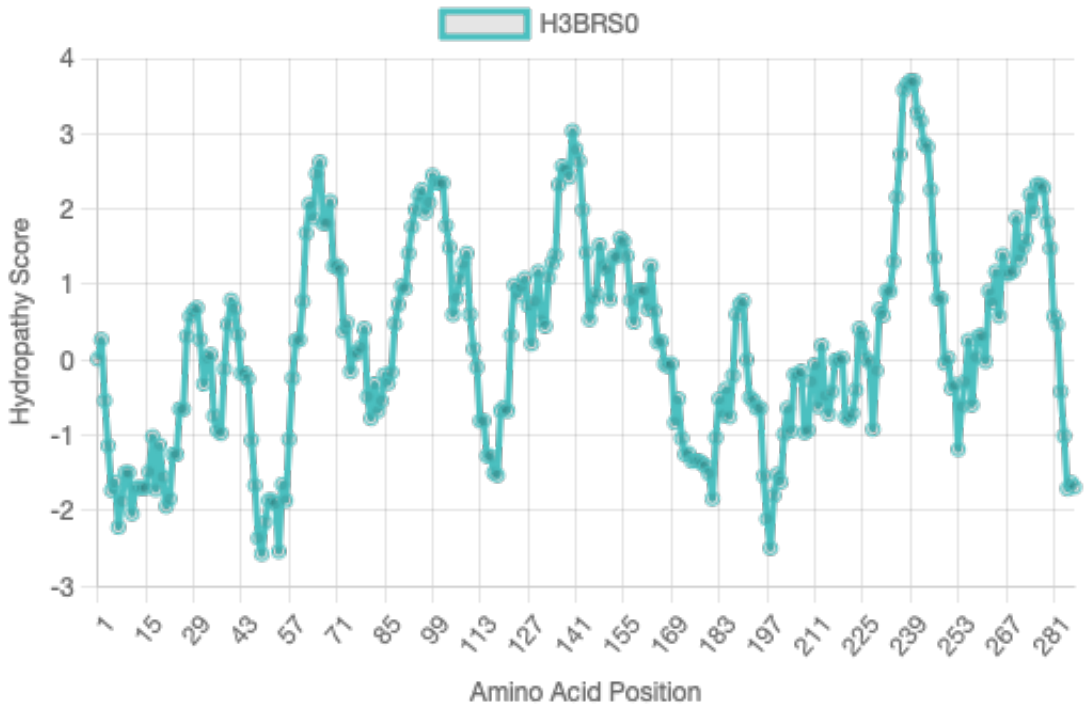
Kyte-Doolittle hydropathy plot for the sequence "P23975-2". Positive values indicate hydrophobic regions, while negative values indicate hydrophilic regions.



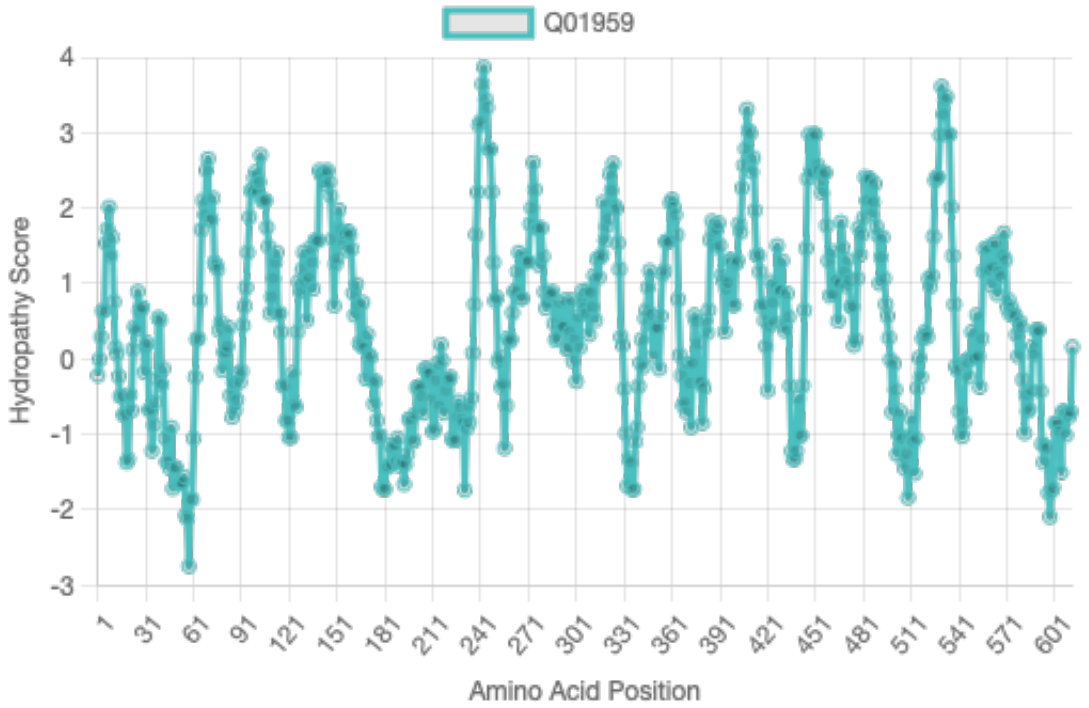
Kyte-Doolittle hydropathy plot for the sequence "P23975-3". Positive values indicate hydrophobic regions, while negative values indicate hydrophilic regions.



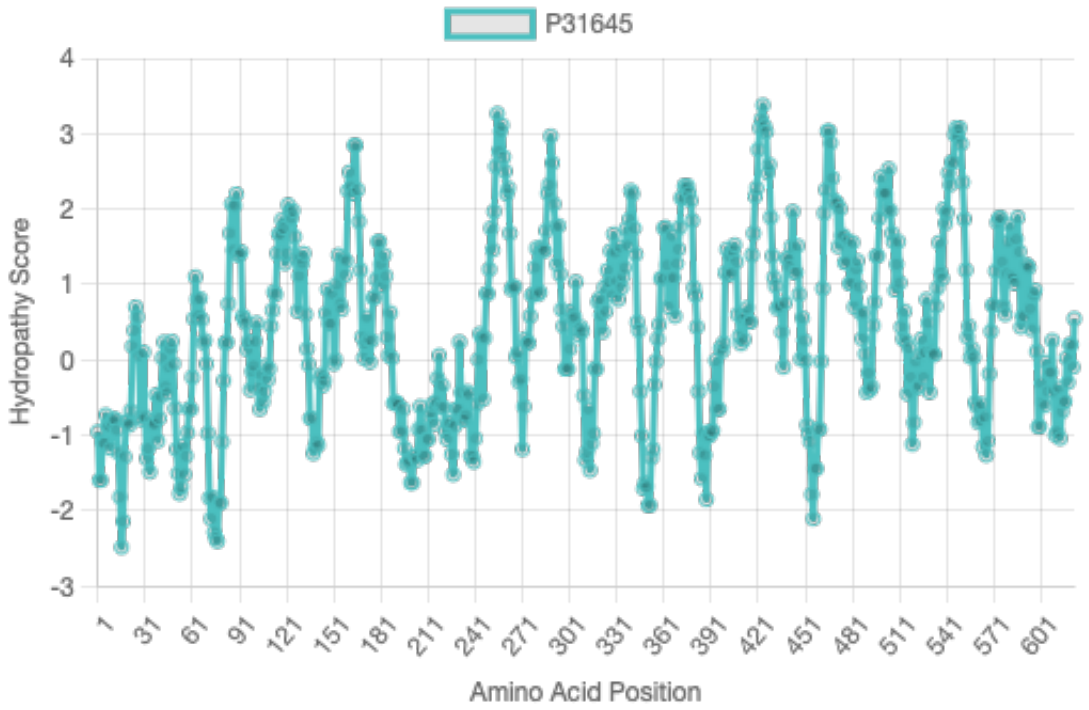
Kyte-Doolittle hydropathy plot for the sequence "A0A804HLI4". Positive values indicate hydrophobic regions, while negative values indicate hydrophilic regions.



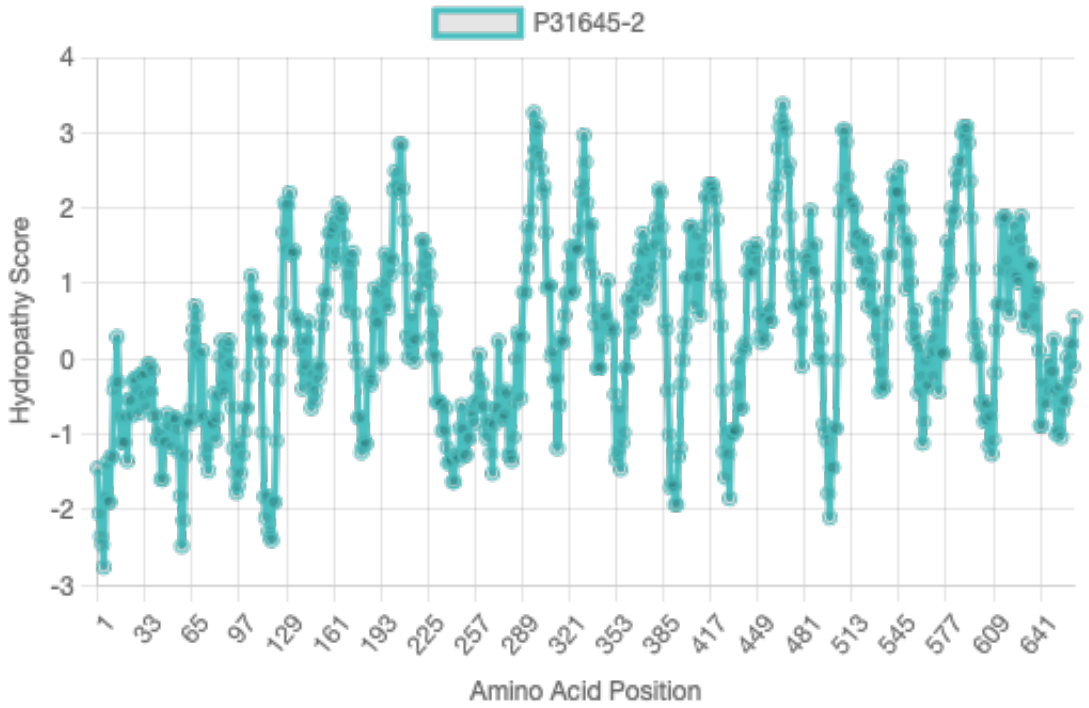
Kyte-Doolittle hydropathy plot for the sequence "H3BRS0". Positive values indicate hydrophobic regions, while negative values indicate hydrophilic regions.



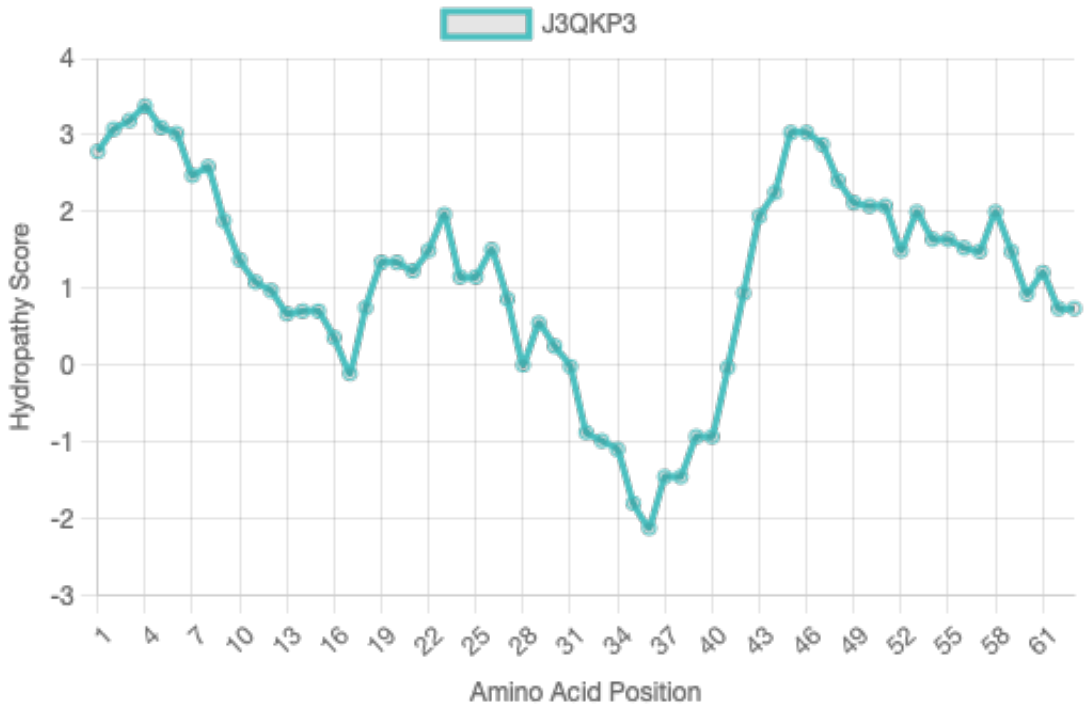
Kyte-Doolittle hydropathy plot for the sequence "Q01959". Positive values indicate hydrophobic regions, while negative values indicate hydrophilic regions.



Kyte-Doolittle hydropathy plot for the sequence "P31645". Positive values indicate hydrophobic regions, while negative values indicate hydrophilic regions.



Kyte-Doolittle hydropathy plot for the sequence "P31645-2". Positive values indicate hydrophobic regions, while negative values indicate hydrophilic regions.



Kyte-Doolittle hydropathy plot for the sequence "J3QKP3". Positive values indicate hydrophobic regions, while negative values indicate hydrophilic regions.
